TECHNICAL INFORMATION

2-2 Service Life Expectancy

■ 2-2-1 Nominal Service Life

TBI define the nominal service life of Ball Spline as 90% of the average running distance before flaking within in the Ball Spline on the same manufacture cycle. Please note that the nominal life expectancy is only for reference use.

■ 2-2-2 Calculating Nominal Service Life

The factors which influence the service life for Ball Splines can be attributed to three main aspects, the torque, radial load and moment. The influence of each aspect can be calculated through equations (7) to (10).

Under a Torque

$$L = \left(\frac{f_{T} \cdot f_{C}}{f_{W}} \cdot \frac{C_{T}}{T_{C}}\right)^{3} \cdot 50 \cdot(7)$$

Under a Radial Load

$$L = \left(\frac{f_T \cdot f_C}{f_W} \cdot \frac{C}{P_C}\right)^3 \cdot 50 \dots (8)$$

L: Nominal Service Life (km)

C_T: Basic Dynamic-Torque (N-m)

T_c: Calculated Torque Applied (N-m)

C: Basic Dynamic-Load Rating (N)

Pc: Radial Load (N)

f_T: Temperature (See Fig 2.2.2)

f_c: Contact (See Table 2.2.1)

fw: Load Factor (See Table 2.2.2)

Under both a moment and radial load applied simultaneously

Calculate the service life from the sum of the radial load and the equivalent radial load.

Under both a torque and radial load applied simultaneously

In this case, calculate the equivalent radial

load to determine service life by equation (9).

$$PE = Pc + \frac{4 \cdot Tc \cdot 10^{3}}{i \cdot BCD \cdot \cos \alpha} \dots (9)$$

PE: Equivalent radial Load (N)

cosα: Contact Angle

i: Number of Loaded Rows of Balls

BCD: Ball Center to Center Shaft Diameter (mm)

(See Table 3.1.1)

Under a moment on a spline nut or two closely attached to one another

Obtain the equivalent radial load using the equation,

and determine the service life by equation (10).

 $P_u = K \cdot M(10)$

Pu: Equivalent Radial Load (N)(Moment Applied)

K: Equivalent Factor (See Table 2.2.3)

M: Applied Moment (N-mm)

However, M should be within the range of the stacic permissible moment.

Calculating Nominal Service Life

Once the nominal life (L) is obtained, if the stroke length and the number of reciprocal operations are consistent, the service life in hours can be obtained by using the following equation.

$$L_h = \frac{L \cdot 10^3}{2 \cdot ls \cdot n_1 \cdot 60}$$

$$L_h : Service Life in Hoteleting S$$

Lh: Service Life in Hours (h)

n₁: Number of Reciprocal Operations per Minute (min⁻¹)

Temperature Factor (f_T)

When the Ball Spline operates in an environment which the temperature reaches 100°C or higher, considering that the heat may adversely affect the operation of the Ball Spline. To avoid malfunction under extreme temperature, Fig. 2.2.2 should be taken into consideration. In addition that the material of Ball Spline should be heat resistant and custom made when use under extreme environment.

 ▼Please inform TBI sales for upgrading the material for the operation environment exceeds 80°C for the reason that the materials of seal and retainers should be upgraded to sustain the high-temperature.

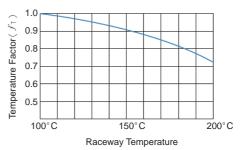

Fig 2.2.2 Temperature Factor (f_T)

Contact Factor (f_c)

When one or multiple Spline nuts are mounted on the Spline shaft closeley, their linear motion is affected by moments and mounting accuracy, resulting in nonuniform load distribution. When closely linked spline nuts are used, multiply the basic load rating (C or Co) by one of the contact factors specified below.

*If a nonuniform load distribution is expected, as in large equipment, take the contact factor explained in Table 4 into account.

Table 2.2.1 Contact Factor (f_c)

No. of Spline nuts Linked	fc
2	0.81
3	0.72
4	0.66
5	0.61
In Normal Use	1.0

Load Factor (fw)

The operation of reciprocal machines is likely to cause vibration and impact. It is difficult to determine the rating of vibration, impact in the event of vibration, and repeated impact during high speed operation, and triggering and ceasing of operation. Therefore, when loads exerted on a linear-motion or operation velocity and vibration is extreme. Take the basic load rating (C or Co) and multiply the figure shown in table 222

Table 2.2.2 Load Factor (fw)

Vibration Impact	Velocity (V)	f _w
Minor	Minor velocity V ≦ 0.25 m/s	1-1.2
Little	Low velocity 0.25 < V ≦ 1.0 m/s	1.2-1.5
Medium	Medium Velocity 1.0 < V ≦ 2.0 m/s	1.5-2.0
Heavy	High velocity V > 2.0 m/s	2.0-3.5

2-2 Service Life Expectancy

■ 2-2-3 Calculating the Average Applied Load

The applied load fluctuates during the operation, for instance the applied load is different during the activities of an industrial robotic arm, industrial robot arm initiates with a workpiece and returns without one, the Ball Spline nut receives variable loads. The fluctuation of applied load influence the service life of Ball Spline, therefore the calculation of service life must take such fluctuation into consideration. When the service life of a Ball Spline with variable load is equal to the one with certain load then that certain load is called the Mean Load.

The Equation is as below

$$P_{m} = \sqrt[3]{\frac{1}{L} \cdot \sum_{n=1}^{n} (P_{n}^{3} \cdot L_{n})} = \frac{P_{m} : \text{Mean Load (N)}}{P_{n} : \text{Fluctuating Load (N)}}$$

$$L : \text{Total Stroke}$$

$$L_{n} : \text{Stroke under Load } P_{n} \text{ (mm)}$$

For Loads That Change Stepwise

$$Pm = \sqrt[3]{\frac{1}{L} \left(P_1^3 \cdot L_1 + \ P_2^3 \cdot L_2 P_n^3 \cdot L_n \right)}$$

P_m: Mean Load (N) Pn: Fluctuating Load (N)

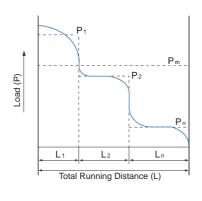

L: Total Running Distance (mm)

L_n: Running Distance Under Load P_n (mm)

For Loads That Change Monotonically

$$Pm = \sqrt[3]{\frac{1}{L} (P_1^3 \cdot L_1 + P_2^3 \cdot L_2 P_n^3 \cdot L_n)}$$

P_{min}: Minimum Load (N) P_{max}: Maximum Load (N)

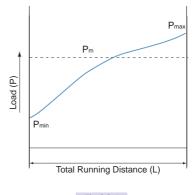

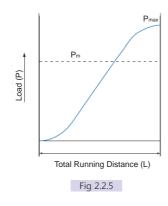

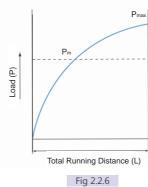

Fig 2.2.4

For Loads That Change Sinusoidal

(a) P_m ≒ 0.65 P_{max}

(b) P_m ≒ 0.75 P_{max}

TECHNICAL INFORMATION

2-3 Calculating the Service Life

Horizontal Application

A 300 mm long Ball Spline supported by two fixed nuts in a horizontal application, the load of the Spline falls vertically downward on the fixed side with 30 mm away from the center of ball spline with the gravity force of W = 30 kg. The figure is shown as Fig 2.3.1

A.Calculates the Spline Shaft Strength

The presented structure of ball spline is an extended bridge, it is designed to absorb torque, therefore, the maximum bending load occurs on Spline nut A:

Maximum Bending Moment $M = 30 \cdot 9.81 \cdot 400 = 117720 \text{ N-mm}$ Maximum Torsion Moment $T = 30 \cdot 9.81 \cdot 30 = 8829 \text{ N-mm}$

For Ball Spline shafts subjected to the simultaneous application of torsion and bending loads, thus the calculation should include Equivalent Bending Moment, Me and Equivalent Torsion Moment Te:

$$Me = \frac{M + \sqrt{M^2 + T^2}}{2} = 117885 \text{ N-mm}$$
 $Te = \sqrt{M^2 + T^2} = 118051 \text{ N-mm}$

 $T_e > M_e$

 $T_e = \tau_a \cdot Z_D$

 $\therefore Z_p = T_e/\tau_a = 118051/49 = 2409.2 \text{ mm}^3$

According to figure of cross section showed on the spline (Table 2.1.3, 2.1.4), the minimum diameter, 25mm is required in order to gain enough strength of Ball Spline, therefore, SLF25 matches the requirement above thus choose SLF25.

B.Calculating the Mean Load

When the shaft extension reached $L_{max} = 400$ mm, it reaches it' maxima load (P_{max})

When it retrieved back to $L_{min} = 100$ mm, it absorbed the minimum of load (\dot{P}_{min})

According to mechanics it allows us to acquire the maximum and minimum Radial Load of Nut A and nut B:

 $\begin{array}{l} P_{Amax} = 30 \cdot 9.81 \cdot (400 + 200) / 200 = 882.9 \; N \\ P_{Amin} = 30 \cdot 9.81 \cdot (100 + 200) / 200 = 441.5 \; N \end{array} \qquad \begin{array}{l} P_{Bmax} = 30 \cdot 9.81 \cdot 400 / 200 = 588.6 \; N \\ P_{Bmin} = 30 \cdot 9.81 \cdot 100 / 200 = 147.2 \; N \end{array}$

When the movement of Ball Spline occurs, the load on the spline is gradual and repeated, according to Fig 2.2.4 the equation of the load on ball spline is shown as :

 $P_{Am} = 1/3 (PA_{min} + 2PA_{max}) = 735.8 N$ $P_{Bm} = 1/3 (PB_{min} + 2PB_{max}) = 441.5 N$

The nuts receive both torsion and bending load simultaneously, therefore assuming that the torsion distributes equally on the nuts. The equation for torsion is shown as T':

 $T' = T/2 = 30 \cdot 9.81 \cdot 30/2 = 4414.5 \text{ N-mm}$

The equivalent factor P_e (B12, equation (9)):

$$Pe = Pm + \frac{4 \cdot T'}{i \cdot dp \cdot \cos \alpha}$$

$$\mathsf{PAE} = 735.8 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 990.2 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N} \\ \mathsf{PBE} = 441.5 + \frac{4 \cdot 4414.5}{4 \cdot 27 \cdot \cos 50^{\circ}} = 695.9 \; \mathsf{N}$$

C.Service Life Ball Spline

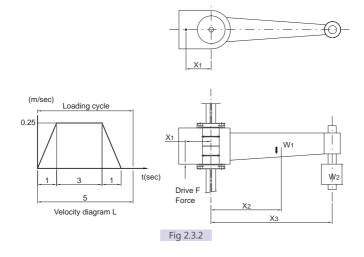

$$\begin{aligned} & \text{Nut A life La} = \left(\frac{f_\text{T} \cdot f_\text{C}}{f_\text{W}} \cdot \frac{\text{C}}{\text{PAE}} \right)^3 \cdot 50 = 14518 \text{ km} & \begin{array}{c} \text{Factors} \\ f_\text{T} : \text{Temperature} = 1 \\ f_\text{C} : \text{Friction} = 1 \\ \end{array} \\ & \text{Nut B life LB} = \left(\frac{f_\text{T} \cdot f_\text{C}}{f_\text{W}} \cdot \frac{\text{C}}{\text{PBE}} \right)^3 \cdot 50 = 41829 \text{ km} & \begin{array}{c} \text{Factors} \\ f_\text{C} : \text{Friction} = 1 \\ \text{C} : \text{Coa} = 9835 \text{ N} \\ \end{array} \end{aligned}$$

The service life of Ball Spline correlates with nut A and the service life is 14518 by estimate.

Vertical Application

A 1200 mm long ball spline with stroke of 1000 mm is mounted on a working platform supported by two fixed nuts on both end. The geometry is shown as Fig 2.3.2

The point of drive force F is $X_1 = 50$ mm, from the center of Ball Spline, the weight platform W_1 is 27 kg, the center of the weight is $X_2 = 300$ mm, away from the center of ball spline, the working cycle of platform is a carriage of $W_2 = 5$ kg, with a downward movement for 5 sec and holds for 10 sec, then elevates for 5 sec and holds for 10 sec to unload the carriage repeatedly. The center of gravity of carriage is $X_3 = 500$ mm, from the center of ball spline, the travelling of velocity is shown as Fig 2.3.2

TECHNICAL INFORMATION

2-3 Calculating the Service Life

A. Analysis on Different Stage of Exertion

Inertial force occurs when a platform is in working modes, drive force is the source of the inertial force.

Inertial force of a m/s² in accelerated ascent and decelerated decent : F = W \cdot (9.81+a) Inertial force of Constant velocity in acceleration and deceleration : F = W \cdot (9.81) Inertial force of a m/s² in accelerated decent and decelerated ascent : F = W \cdot (9.81-a)

Below are the equations of the bending force absorb by the nuts during acceleration, constant velocity, deceleration while ball ascent and decent.

(1) Without carriage (Acceleration while decent)

 $M_{da} = W_1 \cdot (9.81-a) \cdot 300 + W_1 \cdot (9.81-a) \cdot 50 = 90342 \text{ N-mm}$

(2) Without carriage (Constant velocity while decent)

 $M_{dc} = W_1 \cdot (9.81) \cdot 300 + W_1 \cdot (9.81) \cdot 50 = 92704.5 \text{ N-mm}$

(3) Without carriage (Deceleration while decent) $M_{dd} = W_1 \cdot (9.81+a) \cdot 300 + W_1 \cdot (9.81+a) \cdot 50 = 95067 \text{ N-mm}$

(4) With carriage (Acceleration while ascent)

 $M_{aa} = W_1 \cdot (9.81 + a) \cdot 300 + W_1 \cdot (9.81 + a) \cdot 50 + W_2 \cdot (9.81 + a) \cdot 500 + W_2 \cdot (9.81 + a) \cdot 50 = 122732 \text{ N-mm}$

(5) With carriage (Constant velocity while ascent)

 $M_{ac} = W_1 \cdot (9.81) \cdot 300 + W_1 \cdot (9.81) \cdot 50 + W_2 \cdot (9.81) \cdot 500 + W_2 \cdot (9.81) \cdot 50 = 119682 \text{ N-mm}$

(6) With carriage (Deceleration while ascent)

 $\mathsf{M}_{\mathsf{ad}} = \mathsf{W}_1 \boldsymbol{\cdot} (9.81 - \mathsf{a}) \boldsymbol{\cdot} 300 + \mathsf{W}_1 \boldsymbol{\cdot} (9.81 - \mathsf{a}) \boldsymbol{\cdot} 50 + \mathsf{W}_2 \boldsymbol{\cdot} (9.81 - \mathsf{a}) \boldsymbol{\cdot} 500 + \mathsf{W}_2 \boldsymbol{\cdot} (9.81 - \mathsf{a}) \boldsymbol{\cdot} 50 = 116632 \ \mathsf{N} - \mathsf{mm}$

B. The Calculation of Spline Strength

The presented structure of ball spline is supported by two fixed nuts on both ends with an bridge of absorbing bending in the middle. it designed to absorb torque. According to mechanics the Maximum bending load occurs on the supporting end. The Maximum Bending Moment should occur at the end of acceleration.

Maximum Bending Moment M = 122732 N-mm∴ $Z = M/\sigma a = 122732/98 = 1252.4 \text{ mm}^3$

According to figure of cross section showed on the spline, the minimum diameter 25 mm is required in order to gain enough of strength for Ball Spline, therefore SLF25 matches the requirement above thus choose SLF25.

C. Calculating the Mean Load

The nuts and spline mainly affect by the force of bending, therefore converting the force of bending into rail load by using (B12, equation(10)).

$$Pn = K \cdot M$$

According to Table 2.2.3, when joint two SLF25 nuts, The equivalent factor K = 0.023

The average load in every time peroid can be calculate as Pm:

$$P_{m} = \sqrt[3]{\frac{1}{L} \cdot \sum_{n=1}^{n} (P_{n}^{3} \cdot L_{n})} \\ P_{n} : \text{Load in variable} \\ L : \text{Total service distances} \\ L_{n} : \text{Pn Service distances} \\ \text{under loading} \\ (N)$$

$$P_{\text{m}} = \sqrt[3]{\frac{1}{1000}} \left\{ 125 \cdot 2078^{3} + 750 \cdot (2132.2)^{3} + 125 \cdot (2822.8)^{3} + 750 \cdot (2752.7)^{3} + 125 \cdot (2682.5)^{3} \right\}$$
$$= 2481.6 \text{ N}$$

D. Analysis of Ball Spline Service Life

Service Life L_A =
$$\left(\frac{f_{\text{T}} \cdot f_{\text{C}}}{f_{\text{W}}} \cdot \frac{\text{C}}{P_{\text{m}}}\right)^3 \cdot 50 = 922 \text{ km}$$

 f_{T} : Temperature = 1 f_{C} : Friction = 1 f_{W} : Load = 1.5 C: Coa = 9835 N

TECHNICAL INFORMATION

2-4 Determining the Preload

The preload, a significant factor that influence the accuracy, load capacity and rigidity of Ball Spline during operation. Therefore, it is very important to determine the most appropriate size of the clearance for your requirements. The size of the clearance is standardized for each type, enabling the one best-suited for operating conditions to be selected.

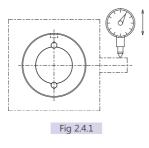

■ 2-4-1 Clearance in the Rotational Direction

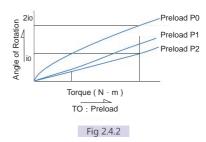

With the Ball Spline, the sum of clearances in the circumferential direction is standardized as the clearance in the rotational direction. Clearance in the Rotational Direction. (BCD)

■ 2-4-2 Preload and Rigidity

The preload is the load applied to balls prior to use for the purposes of eliminating angular backlash (clearance in the rotational direction) and improving rigidity. The application of a preload can eliminate angular backlash in the Ball Spline in accordance with the level of applied preload, and can improve rigidity. Fig 2.4.2 shows the amount of displacement in the rotational direction when a rotational torque is applied. As shown in Fig 2.4.2, the effect of pre-loading continues until the torque becomes

Fig 2.4.2 2.8 times greater than the preload applied. Compared with a setting without a preload, the displacement at the same rotational torque is half of the one with a preload and the rigidity is twice as great.

■ 2-4-3 Operating Conditions and Determination of the Preload Level

Table 2.4.1 presents guidelines for determining the appropriate clearance in the rotational direction for different operating environment. The rotational clearance of the Ball Spline significantly affects the accuracy and rigidity of the Spline nut. Therefore, it is critical to select the clearance best suited to the intended uses of the Ball Spline. Normally, the Ball Spline is preloaded. When it is subjected to repeated swiveling and reciprocal linear motion, the system receives heavy vibration and impact. In such an environment, preload prolongs the service life and improves accuracy.

Table 2.4.1 Guidelines for Determining an Appropriate Ball Spline Clearance according the Rotational Direction.

	Preload	Operating conditions	Applications
u	Medium Preload P2	 High rigidity is required. Vibration and impact are severe. The moment load must be borne by a single spline nut. 	 Construction-work-vehicle steering shaft. Spot-welding-machine shaft. Automatic-lathe-tool rest indexing shaft.
Clearance in the Rotational Direction	Light Preload P1	 Hanging loads and moments are applied. High position accuracy is required. Alternate loads are applied. 	 Industrial robot arm Various automatic. loaders. Automatic-painting-machine guideshaft. Electric-discharge-machine spindle. Press die-set guideshaft. Drilling-machine spindle.
Clearan	No Preload P0	 Smooth movement should be achieved with only a low magnitude of force. Torque is continually applied in a given direction. 	 Various measuring instruments. Automatic drafting machine. Shape-measuring instrument. Dynamometer. Wirewinder. Automatic arccutter. Honing-machine spindle. Automatic packing machine.

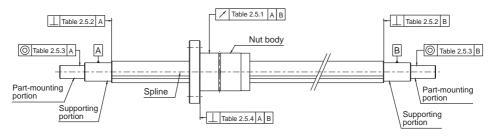

Table 2.4.2

Preload Nominal Diameter					er	No Preload P0	Slight Preload P1	Medium Preload P2
6	8	10	1	12	13	-2 ~+1	-6 ~ -2	-
15	5	16	6 20 -2 ~+1 -6 ~ -2		-9 ~ -5			
	25 30		30 -3 ~+2		-3 ~+2	-10 ~ -4	-14 ~ -8	
	40 50			-4 ~+2	-16 ~ -8	-22 ~-14		

2-5 Accuracy

■ 2-5-1 Accuracy Grade

The accuracy of the Ball Spline is determined by the spline-nut and thus divided into three accuracy grades of Normal(N), High(H), and Precision(P).

■ 2-5-2 Accuracy Specifications

Tables 2.5.2~2.5.5 indicate the tolerance of callout of the Ball Spline.

^{*}Applies to any effective stoke of 100mm Ball Spline shaft.

TECHNICAL INFORMATION

2-6 Lubrication

The spline nut is prelubricated prior to shipment for immediate use and the maintenance period is varied according to the operating conditions. TBI suggested that under normal operation condition please lubricate your TBI Ball Spline after 100 Km (6-12 months) of operation. Apply lubricant within the nut body or on the groove of Spline shaft.

2-7 Material and Surface Treatment

Provides customize material and surface treatment in order to meet extreme operation condition. Please contact service window for customized surface treatment and material.

2-8 Precautions of Ball Spline

■ 2-8-1 General Maintenance

- (1) Disassemble ball spline without supervise of certified engineer will cause malfunction of the ball spline.
- (2) Gravity causes the spline nut slides when lining the ball spline, handle with care.
- (3) Do not hammer, free fall the ball spline, such action will damaging the ball spline and might hinder the performance of ball spline.
- (4) Prevent debris, scraps from intervene the ball spline cause it will decrease the performance to ball spline or lead to malfunction.
- (5) Prevent the ball spline operates under extreme condition. Contact service window when the TBI ball spline is intend to use under extreme condition.
- (6) Coolant might cause malfunction on the ball spline, please consult certified engineer for the use of coolant.
- (7) Clean attached debris and scraps before relubrication.
- (8) Please consult certified engineer when the ball spline is designed to operate under frequent vibration, vacuum, extreme high and low temperature condition.
- (9) Please consult certified engineer when mounting a through hole on the flanged ball spline.

■ 2-8-2 Lubrication

- (1) Remove anti-dust oil before seal the ball spline with grease.
- (2) Prevent mixing of different kind of grease, it will cause unexpected chemical deform.
- (3) Please contact certified engineer for consulting the use of grease when the ball spline is designed to operate under frequent vibration, vacuum, extreme high and low temperature condition.
- (4) Please consult certified engineer for the use of non-certified grease.
- (5) When using motor oil to serve the purpose of lubrication, it might cause performance declining due to the improper installation, please consult certified engineer.

■ 2-8-3 Storage

Prevent extreme temperature and humidity while storing the ball spline, please use certified seal and storage in a horizontal position.

TECHNICAL INFORMATION

2-9 Mounting

■ 2-9-1 Tolerance on Support Unit

Ball spline nut and its support unit is bore to minimize the clearance. If high accuracy is not required, then a clearance fit can be used.

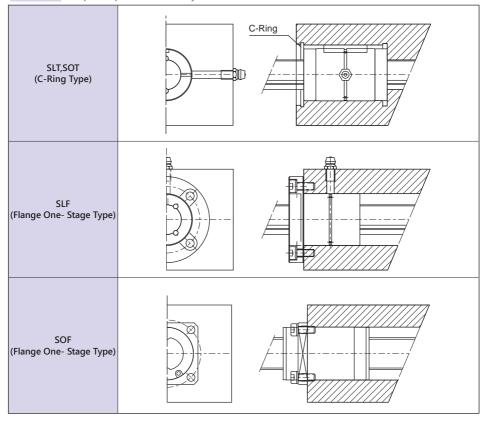

Table 2.9.1

Condition	Tolerance within Support Unit				
General Operation Condition	H7				
Operation Under Minimize of Axial Clearance	J6				

■ 2-9-2 Installation of Ball Spline

The installation of the Ball Spline is shown as Fig 2.9.2. Though the strength of mounting is not strictly required, but it has to be certain that the spline shaft firmly fixed on the support unit.

Table 2.9.2 Sample of Spline-Nut Assembly

2-9 Mounting

■ 2-9-3 Installation of Spline Nut

When installing a spline nut into the spline shaft, use a jig shown in fig 2.9.1 to insert the spline with care.
